SEMS

Shared Energy Management Service

What challenge or problem are you addressing? What is the need for the project?

Public Sector organizations are facing a significant challenge to meet the 2020 and 2030 energy targets. To deliver the required savings a public sector governed shared service is required. This would deliver energy savings through *frameworks for design build and retrofit *dedicated skilled energy expertise *best practice in energy performance contracting and procurement *energy advisory services *energy audits and business case development *contractor management *monitoring and verification. A similar (but separate) need exists within the SME sector who cannot support full-time energy managers.

Objective of the project: What your project wants to achieve/change

One/Two shared energy management services delivered through an energy agency model for: 1. Public Sector organisations and/or 2. SMEs at regional level. To deliver 33% efficiency targets for the public sector and 20% for SMEs.

Why do you need transnational cooperation?

To learn from best practice of experts in this field, Product-independent, strong interdisciplinary requirement, maximize transferability at regional level,

What kind or partners are you looking for?

Energy Agencies, Local Authorities, Regional Authorities, Local Enterprise Offices,
