IG Immigration Guidance

11

What challenge or problem are you addressing? What is the need for the project?

Due to the difficult access to (European) legal information on the one hand, and non-practical information for migrants and (im)migration professionals on the other hand, consistent application of European procedures and equal practice of immigration law is not always a reality. This can result in arbitrariness and unequal treatment.

Moreover, the lack or complexity of this information leads to unnecessary long turnarounds at migration offices and slower integration in the receiving municipalities.

In order to optimize procedures at migration offices, and improve the intelligence about jurisprudence and immigration law, a new legal platform and app will be developed, called Immigration Guidance.

Objective of the project:

- Contribute to cost reductions in national asylum systems by optimizing procedures and reducing turnarounds and backlogs.
- Enable faster integration of recognized refugees, thereby accelerating their economic value and reducing the burden on social systems.

Why do you need transnational cooperation?

Migration inherently is a cross-border subject. Every part of the NWE region must deal with their share of migration related issues. Therefore, within the IG project transnational cooperation and knowledge exchange of best practices is fundamental.

What kind or partners are you looking for?

Experience with managing some or multiple part of the migration chain:

- Local public authorities
- Local or regional development agencies, employment agencies, etc.
- Universities, scientific institutions, NGO's
