CareNet

Care Network 4.0

4

What challenge or problem are you addressing? What is the need for the project?

Problem:

- Need to adapt the in- and outpatient care systems to demographic changes

Challenges:

- Sustainable implementation of technical solutions
- Development of an e-health network
- Efficient use of resources

1. **Research:** development of new technologies to improve the implementation of e-Health
2. **Implementation:** of e-Health solutions for the in- and outpatient care system
3. **Network 4.0:** improving the communication and interfaces between different actors within the care system

Objective of the project:

- Implementation of new technologies in the existing care system
- Empowerment of patients
- Efficient use of resources
- Reducing costs of the care system

Why do you need transnational cooperation?

Creating a transnational network to improve technical solutions for individual care optimization

➔ Exchange of experience and knowledge
➔ Removing existing barriers for international interfaces in the care system

What kind of partners are you looking for?

- Partners in regions with an existing Network
- Partners in rural areas without an existing Network
- Partners with technical know-how (e.g. universities or from the IT-business)
- Partners from the care system (in or out patient)
