

JOHN PRENDERGAST

LEAD ON WORK PACKAGE T3: OPTIMISE PRODUCT DEVELOPMENT
OF WILLOW RESIDUES

John is the Project Manager of BioWILL and founder of Epiteal Ltd

What will Epiteal do?

- Epiteal will research the potential of producing supporting dermatology products to include natural salicylic acid from willow.
- Additional research will be done looking into inflammatory effects of natural salicylic acid used topically or systemically.
- This will give a more effective option than NSAID medications for osteoarthritis.
