

Dynamic landfill management: an introduction to anthropogenic resource management

Eddy Wille, Senior advisor-geologist, OVAM

Overview

- Rawfill-project
- Dynamic Landfill Management
- Conceptual site model versus Complex adaptive systems
- Experiences ?
- The myth of Orion & Cedalion
- DST 1 : Cedalion
- DST 2 : Orion

https://www.nweurope.eu/projects/project-search/supporting-a-new-circular-economy-for-raw-materials-recovered-from-landfills/

Raw materials recovered from landfills

The Interreg North-West Europe Project is coordinated by SPAQuE and unites 8 partners from 4 EU regions.

100.000 landfills in North-West Europe

Most of these sites lack state-of-the-art environmental protection systems, leading to local pollution, land-use restrictions and global impacts.

Fortunately, the large volumes of resources can be recovered through Landfill Mining.

The main challenge for stakeholders is the profitability risk due to the lack of reliable data on the recovery potential of landfills.

Outcomes of RAWFILL

- enhanced framework for private/regional/ transregional landfill inventories
- landfill geophysics
- decision support tool

Waste management in Flanders

North-West Europe

Household waste per inhabitant of Flanders

The amount of residual waste we produce is decreasing much more slowly than the waste that is collected separately. Therefore, OVAM wants to improve separate collection even more.

How is residual household waste processed?

950,000 TONNES

This is the amount of nonseparated residual waste collected in Flanders each year.

How much food are we wasting?

Flemish consumers waste up to 23 kg of food per person each year.

For Flanders as a whole the amount is between 94 and 142 million kilograms.

With this amount of food 30,000 football teams can be fed for one year.

WTF Landfills ?! What's the future of landfills ?

Final waste disposal ?

Start of a bright future?

COCOON objective : develop, integrate and improve relevant crosscutting policy instruments on landfill management in the EU

Landfilling : final waste disposal sites as the end of the line in a linear economy

Is this the end of story ?

COCO

Interreg Europe

Risk based approach (source – pathway – target) : install a safe infinite containment

guarding the status quo :

Is this static concept robust to environmental changes ?

COCOON-analysis :

- Poor exchange of data of (former) landfills
- Majority of old landfills (<1999) seldom state of the art; often lacking LT-monitoring & aftercare
- · LT-effects not limited to landfill scale: local level to global level
- · External impact underestimated: climate change, spatial pressure, flooding, soil sealing, drinking water protection
- · Rarely landfilling with regard to re-mining (monofills)

COCOON-conclusion :

- · Dynamic landfill management approach required in view of demand and supply
- · Integration in broader frameworks : circular economy, resource efficiency, sustainable development

Transiti N to a dynamic landfill management focusing on Resources and Reserves in order to provide Waste to Materials/Energy/Land & Protection of Resources.

Dynamic Landfill Management

Transition of Landfills : Dynamic Landfill Management from waste to resources

Conceptual Site Model

Discharge Confining clay layer

Flow

Main aquifer zone **Regional confining layer**

Upper aquifer

Figure 3-1. Initial conceptual site model showing a confining layer between two aquifers.

Traditional Conceptual Site Model sets focus mainly on impacts and risks.

Seldom detailed data on waste (quality and quantity), infrastructure, geotechnical characteristics,...

Often limited scales (spatial, timing,...)

Conceptual Site Model

Figure 6-3. Site Conceptual Model—Exposure Pathway Evaluation

Conceptual Site Model identifying : Source – Pathway – Target

Black box : what's leaving the box ?

Conceptual Site Model

Main objective : preventing/remediating soil & groundwater contamination

Latest news : roadmap New Soil Strategy EU

https://ec.europa.eu/info/law/better-regulation/have-your-say/initiatives/12634-New-EU-Soil-Strategy-healthy-soil-for-a-healthy-life

Ref. Ares(2020)6391319 - 05/11/2020

	ROADMAP
Roadmaps aim to inform citized feedback and to participate eff invited to provide views on the available any relevant informati	ns and stakeholders about the Commission's work in order to allow them to provide ectively in future consultation activities. Citizens and stakeholders are in particular e Commission's understanding of the problem and possible solutions and to make on that they may have.
TITLE OF THE INITIATIVE	New Soil Strategy - healthy soil for a healthy life
LEAD DG - RESPONSIBLE UNIT	DG ENV D1 Land use and management
LIKELY TYPE OF INITIATIVE	Communication
INDICATIVE PLANNING	Q2 2021
Additional Information	The update of the Soil Thematic Strategy was announced in the EU Biodiversity Strategy for 2030. 1

Dynamics of the system

In situ & ex situ landfill dynamics

Internal dynamics: degradation

External dynamics: anthropogenic

External dynamics: Natural / climate

Dynamics of the system

Keep in touch with the dynamics of the system. Predictions and modelling are part of it and might change.

Evolution of Commodity prices (2011)

Complex Adaptive Systems

The art of sustainable management

Complexity:

- Diversity of stakeholders;
- Uncertainties about causes, consequences & remedies;
- Different formal & informal laws and levels of government;
- Difficulty to rapid change of configurations;
- Complex dependencies which constantly change.

SAMEN MAKEN WE MORGEN MOOIER

The myth of Orion, Cedalion

Servant Cedalion is leading the temporary blinded giant Orion to the light Eos.

The metaphor of dwarfs standing on the shoulders of giants (Latin: nanos gigantum humeris insidentes) expresses the meaning of "discovering truth by building on previous discoveries".

Isaac Newton in 1675: "If I have seen further it is by standing on the shoulders of Giants."

The myth of Orion, Cedalion

Decision Support Tool 1 : Cedalion
Easy to use application (no specific expertise required).
Quick scan & overview

Decision Support Tool 2 : **Orion**

Roadmap and dashboard to facilitate detailed analysis by using specific tools (expert level required). Complex, only for most promising landfills.

Ranking & preparation business cases

The myth of Orion, Cedalion

Cedalion: the ranking tool

Principle: basic criteria will give a scoring on 4 main concepts.

- Waste to Materials (WtM)
- Waste to Energy (WtE)
- Waste to Land (WtL)
- Interim Use (IU)

Interreg RAWFILL Interreg RAWFILL Decision support tool to evaluate the Enhanced Landfill Mining Potential of landfills. The aim of the RAWFILL methodology is to evaluate the landfill mining potential for the 4 scetto to Energy, Waste to Land, Waste tot Materials and Interim Use, Hereunder you can find a schematic overview on how the tool works. In the header of every shadditional information on how to use the tool. The RAWFILL methodology is a re-evaluation on the tool works. Data management & Cedalion

Objective : Getting actors interested in landfills by providing information and viable options which they can evaluate and customize.

Cedalion: online questionnaire

- Application: smartphone, tablet, laptop,...
- Target: collect up to date info about the landfill, by doing a 360° prospection on site
- Output: mail with Excel-file
- Receivers: user of field app (and administrator)

Dear user,

Thank you for using the Cedalion tool developed by the RAWFILL project. To use the data acquired during your field visit, please follow the instructions:

1. Open the attached spreadsheet.

Paste the single row in the attached spreadsheet in on the Results_field_visit" sheet of the Cedalion tool.

In the "Compare_field_data" sheet of the Cedalion tool, press the button "Get data from field visit" to compare the data collected on site with the original data from your database.

 If you want to update your database with the new data, change the content of the pale green cells and press the button "change fields in working database".
 Start the ranking calculation.

A copy of your field observations have been also sent to the organisation managing the Cedalion in your region. These data will help them to update their database.

For more information regarding the RAWFILL project, please visit the <u>RAWFILL</u> website.

Thank you again for using our tool,

The RAWFILL project partners.

If you want to unsubscribe from these emails, please use this form.

RAWFILL Interreg NWE - Cedalion - Field visit results.xlsx 23 kB

Results of the site visit

Please copy the results of your site visit here. An Excel table has been sent to your e-mail address, after submitting the form. If you haven't received

Viability of the LFM-Project

DST 2 is a tool in the evaluation process of a potential Landfill Mining Project. Main Question : **Will the LFM-project be viable?**

3 sets of criteria must be evaluated :

- Technical criteria. Is the project technically feasible?
- Socio-economic criteria. Is the project sustainable and economically viable?
- Information-quality criteria. Is there enough info to make a reliable evaluation ?

DST 2: optimizing good ideas

- Not reinventing the ۲ wheel but acting circular;
- Look back and use • results of Cedalion;

•

- Dashboard offers you a • set of valuable tools;
 - Press start to take control and get customized info.

DST 2: optimizing good ideas

Select landfill with high scores in Cedalion.

Mono landfills indicate high grade content; prospective projects. Specific approach required unless small volume.

New-Mine aims specifically at Waste to Materials. Types of waste define viability.

If not feasible, use other criteria in flow chart.

Prevention of pollution remains essential goal. First step is defining risks and remedial actions.

If no remedial actions needed, investigate redevelopment potential of small volume landfills.

If larger volumes, low thickness might offer opportunities for evacuation of landfilled waste.

High volumes below ground level have negative impact on feasibility.

In order to lower costs, first assessment uses ONTOL default values. If losses lower than 200.000 euro/total volume, a business case is set up. The Orion Dashoard guides the users to relevant (free) models detected by Rawfil.

If losses are bigger, invest in more detailed research and refine the ONTOL-input.

Non-viable projects will be submitted to the analysis of Interim use.

Orion: assembling good quality

Geological Research Seminar UG November 6th 2020

LANDFILL MINING DECISION TOOL

START

This tool allows the user to have a first understanding of the feasibility of mining a landfill, by estimating the net income of the project, as well as the social and environmental impacts. The user enters the characteristics of the landfill on the "User Input" tab. The results are displayed on the "Results" tab. Also, the tool allows the estimation of the amount of Rare Earth Elements present in the landfill, a well as the potential value
