

## Post-testing form : SolarDew, a start up in the Netherlands / April – September 2021

### BASIC INFORMATION ABOUT YOUR COMPANY

SolarDew has developed a solar water purification and desalination technology for families and communities in areas affected by water scarcity. Currently, water scarcity affects 700 million people; traditional sources are becoming saline or too contaminated to drink. By 2030 4 billion people will be dealing with these issues!

### BRIEF INFORMATION ABOUT THE ACTIVITIES WITHIN WTN

SolarDew is developing a product that can produce clean drinking water from seawater in a single step by evaporating and condensating water through a membrane. SolarDew is gearing up for a market launch in 2022 and therefore the pre-production prototypes needed to be tested. Due to the Water Test Network, SolarDew has been validating the long-term performance of their products when it comes to water production and quality in every stage of the life cycle.

### WHAT IS THE ADDED VALUE OF WTN AND WHY WOULD YOU RECOMMEND WTN TO OTHER SMES?

The WTN has provided us with the knowledge, experience and resources to fully evaluate the technology and obtain an independent validation of our product. For companies which are about to launch a product into the market, this is invaluable. Not only because it expands our testing capabilities, but because it allows us to provide investors and launching customers verification of the quality of our technology and products.
