

Testimonial Priovention BV,

period of testing: May – Oct 2022

BASIC INFORMATION ABOUT YOUR COMPANY

Priovention BV is developing 2 activities, namely a washable diaper to be used the nursing homes and long term care facilities and an Ecosystem in which we collect, wash and return the washable diaper.

This combination creates a local and circular alternative for the disposable diapers that are incinerated. The results in a scalable blueprint in order to significantly reduce CO2 emission.

TEST TO BE CONDUCTED THROUGH THE WATER TEST NETWORK

We will test a locally based cleaning module, purely focussed on adult diapers that contain medication and pathogens.

A part of the analysis leads to a proven water treatment system on the back-end and a proven clean washed diaper at the front of the standardised procedure.

WHY MAKING USE OF A WTN VOUCHER? WHAT IS THE ADDED VALUE OF WTN

With this voucher we can analyze all potential biohazards and related risks in order to take appropriate measures to prevent them from entering the water systems.

This results to a formula to safely and locally wash diapers. The network to which Priovention is being introduced will be of great value, because this huge and important challenge of CO-2 emission reduction will only be achieved in close co-operation between public and private organisations.
