

Post-testing form Van Remmen UV Technology

BASIC INFORMATION ABOUT YOUR COMPANY

Please fill in a short company bio here. (max. 50 words)

Van Remmen UV Technology is supplier of Europe's most sustainable UV disinfection and oxidation systems. A unique approach and great passion for our profession is the strength of our company. We look further and think in solutions.

BRIEF INFORMATION ABOUT THE ACTIVITIES WITHIN WTN

Which innovation/product did you test? And why? (max. 75 words)

A cutting edge combination of Direct Nanofiltration as pre-treatment for an Advanced Oxidation step with UV-H₂O₂ for the removal of organic micropollutants for tertiary wastewater and other streams. The goal of this technology combination is to make water of drinking water quality in one step from tertiary SWTP effluent. Next to proving drinking water quality also a high removal of heavy metals, microplastics and antibiotic resistant microbiology will be demonstrated.

WHAT IS THE ADDED VALUE OF WTN AND WHY WOULD YOU RECOMMEND WTN TO OTHER SMES?

Please fill in your opinion here. (max. 75 words)

WTN gave us a unique opportunity to test new synergies and approaches to our process with relevant and current partners and water quality. Testing like we did at WTN Apeldoorn was a very flexible and approachable chance to 'do more with less'. Everything we needed was present, we got all freedom to experiment, and at moments when high feedback or analysis was needed the receiving waterboard provided a great sparring partner.
