eHealth

Dietmar Griep Manager Information Management

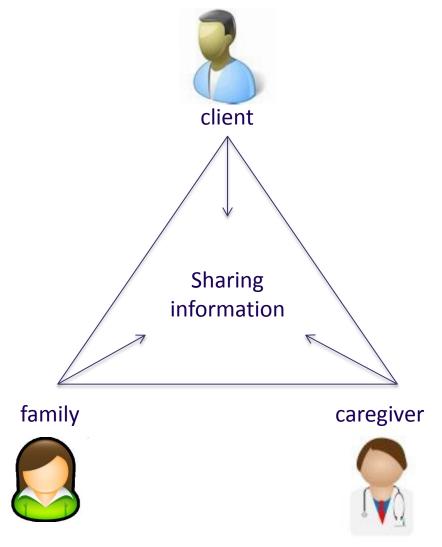

Agenda

- Our vision
- The roadmap towards the vision
- The factors influencing the roadmap (the lessons learned):
 - 1. Clients
 - 2. Caregivers
 - 3. Creation of eHealth modules
 - 4. New technology

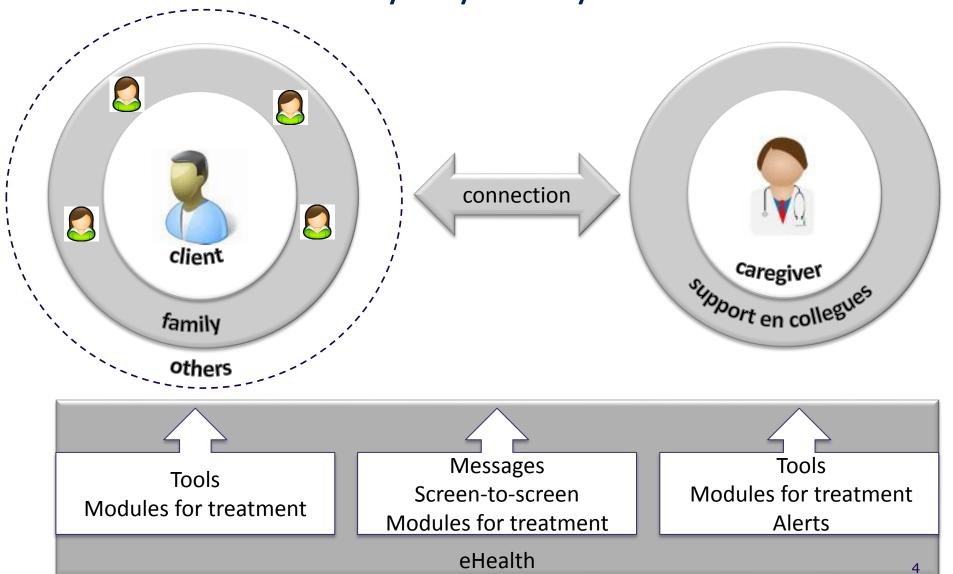

Our vision: An environment supporting the cliënt and family day to day

An eHealth environment supporting the cliënt and family day to day

The roadmap towards this vision

2007	Anonymous eHealth	Point Solution
2012-2014	Online ROM & blended eHealth	Platform
2014-	Development of eHealth modules	eHealth Builder
2014-	eHealth included treatment	Antes Treat- ment Model
2016-	Family & Friends	Family portal & modules
2017-	Co-creation with clients	New Modules
2017-	Open platform	Koppeltaal

1. Clients

Every client is treated with blended care, unles...

...the client doesn't want to

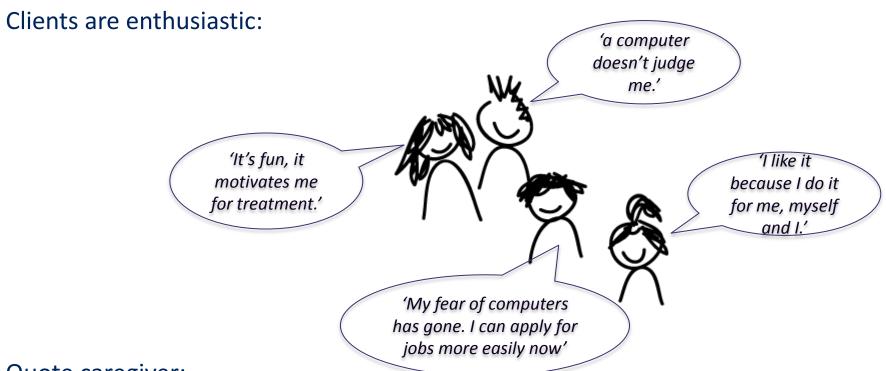

...the caregiver has good reasons not to (and his/her superior approved)

Day to day limitations:

- Dutch language
- Functional illiteracy and mental impairments
- Computer skills
- Access to computer and internet

Feedback

Quote caregiver:

'My patients tell each other what they did in de modules. And that's how they come to talk about their treatments together.'

- Start eHealth modules together with caregiver
- Different groups require a different approach (young vs old, disorder, cognitive abilities)
- Blended
- Simplify simplify simplify
- Preferred device: smartphone
- Support

eHealth included treatment

Development of eHealth modules

Co-creation with clients

2. Caregivers

First reaction is often:

- ..I'm too busy with all those programs
- Evidence based is my standard
- Unfit for my population of clients
- A lot is changing or 'change is the only constant'

- New skills needed
 - Self management client: connect and modify
 - Written Motivational interviewing
 - A-synchronous contacts with the client
- Assign 'homework' and give Feedback
- Simplify simplify simplify
- Support
- Required Knowledge:
 - Content of modules
 - ICT

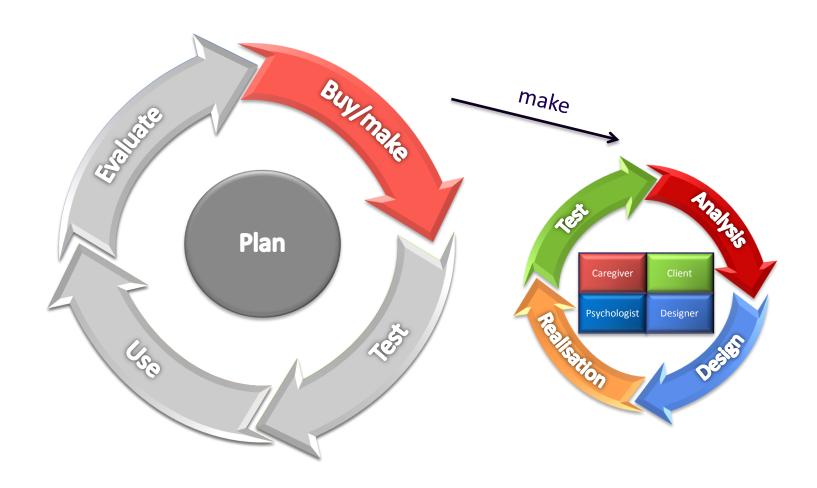

eHealth included treatment

Development of eHealth modules

3. Creation of eHealth modules

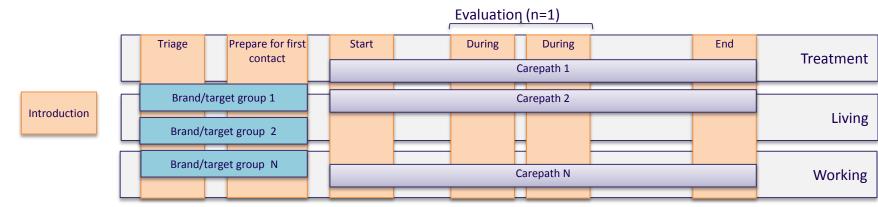

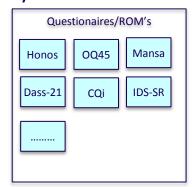

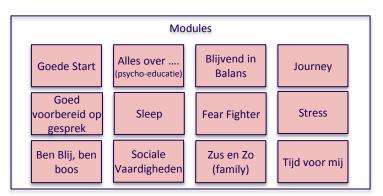

eHealth included treatment

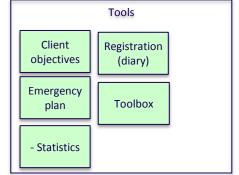

Library

- Co-creation
- Fit seamlessly in treatment
- Support of recovery (Treatment, Living, Working)
- From evidence based to practice based
- Measure, evaluate and change

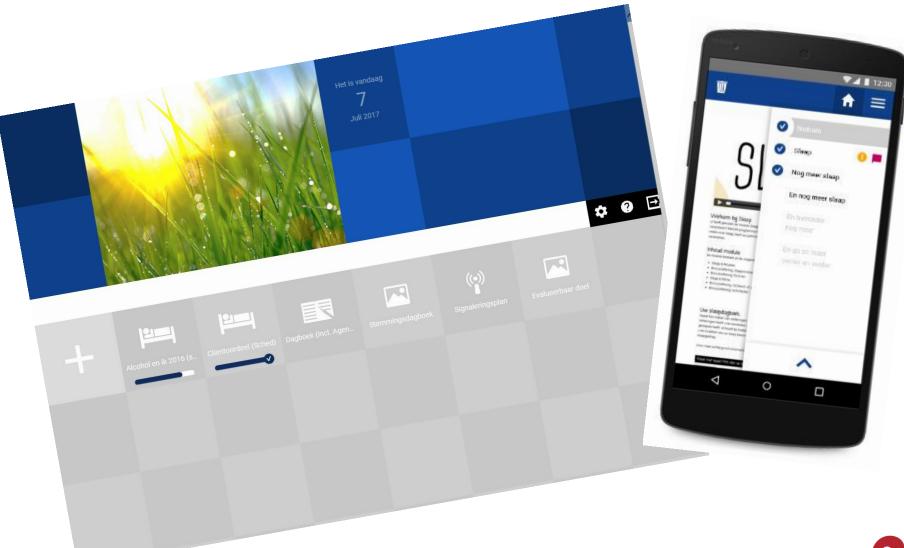

eHealth included treatment

Development of eHealth modules

Co-creation with clients

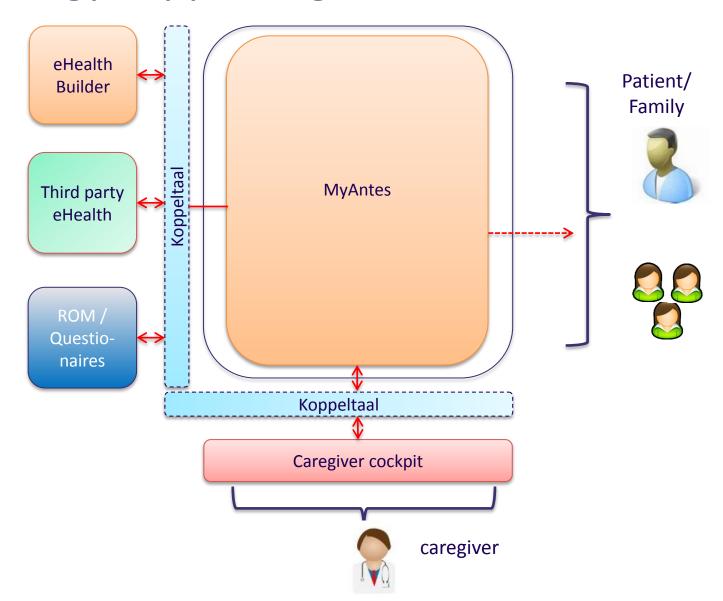

4. Technology

Techology supporting eHealth

- Caregiver
 - Cockpit with activity monitoring and alerts
 - Direct access to ROM
 - Assign modules automatically when diagnosis and treatment are determined
- Patient / family
 - All devices
 - Personal MyAntes environment
 - Support self management
- Standard interfaces
