

# Does it work?

## Evaluating Digital Health

**Dr Marilyn Lennon**

**Senior Lecturer**  
**Digital Health and Wellness Research Group**  
**University of Strathclyde**  
**[Marilyn.Lennon@strath.ac.uk](mailto:Marilyn.Lennon@strath.ac.uk)**

# My Background

---

- Senior Lecturer in Digital Health and Wellness
- BSc. Psychology (1998)
- PhD Computing Science (2002)
- Smart Home Technologies and Independent Living
- Technology enabled self management of LTCs
- Implementation and evaluation of digital health at scale
- £37m 'dallas' programme – Innovate UK 2012-2015

# The Opportunity

Citizens expect health and care to be part of their digital lifestyle

# The Challenge

---

How do we know if our solution 'works'?

How do we get products and services  
routinized at scale....

.....quickly?

# Depends how you pitch it....

---

lifestyle

Behaviour  
changing

Decision  
support

therapeutic

persuasive

Self  
management

diagnostic

clinical

# How do you evaluate mhealth?

---

## The Medical Device Perspective:

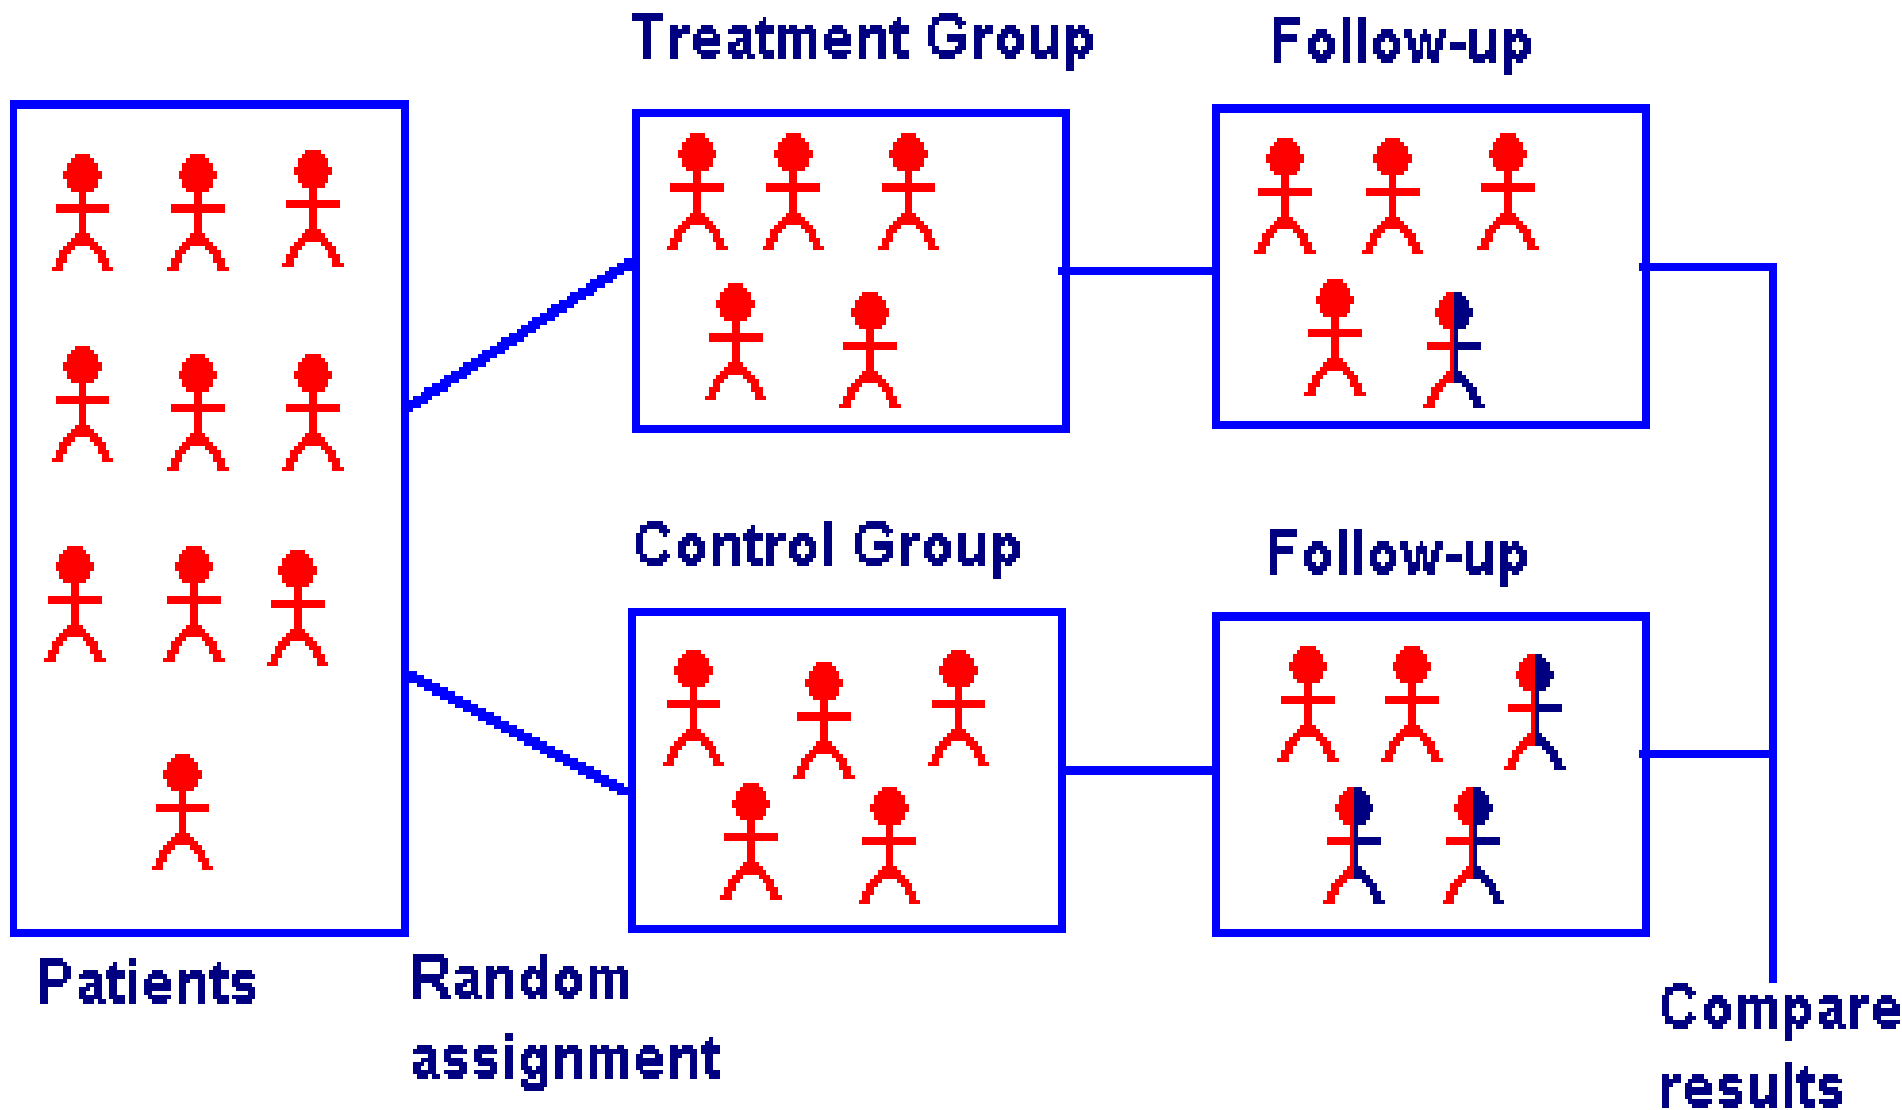

### 1. Is it **Safe**

- Does not cause harm

### 2. Is it **Effective**

- Does what it is supposed to do (acne example)

# The Drug Testing Model

# How do you evaluate mhealth?

---

## The Technologists Perspective:

3. Is it **technically sound** / does it function as intended?

# Controlled Lab Studies

# How do you evaluate mhealth?

---

## A User Centered Perspective:

- ◎ **Usable**
- ◎ **Accessible**
- ◎ **Has Perceived Utility**
- ◎ **Source of content**
  - clinical / **evidence based** / sponsored

# Co-design

**carer**

**patient**

**citizen**

**consumer**

# How do you evaluate mhealth?

---

**An economist/commissioner/funder  
view:**

- ◎ **Cost Effective**

**£4.4bn**

could be invested  
back into the NHS  
with better use of  
information and  
technology

Source:  
PwC

**£1.3bn**

worth of  
prescriptions  
were dispensed in  
the community in  
2013

Source:  
Health and Social Care  
Information Centre

**29%**

of key stakeholders  
believed the ambition  
to go paperless by 2018  
was realistic

Source:  
*Health Service Journal*  
magazine

# How do you evaluate mhealth?

---

## A policy makers view?

- ⊙ **Does it change the way we do/deliver something?**
- ⊙ **Does it improve quality of care?**
- ⊙ **Does it demonstrate ROI?**

---

**So how do we satisfy all these  
requirements and keep everyone  
happy?**

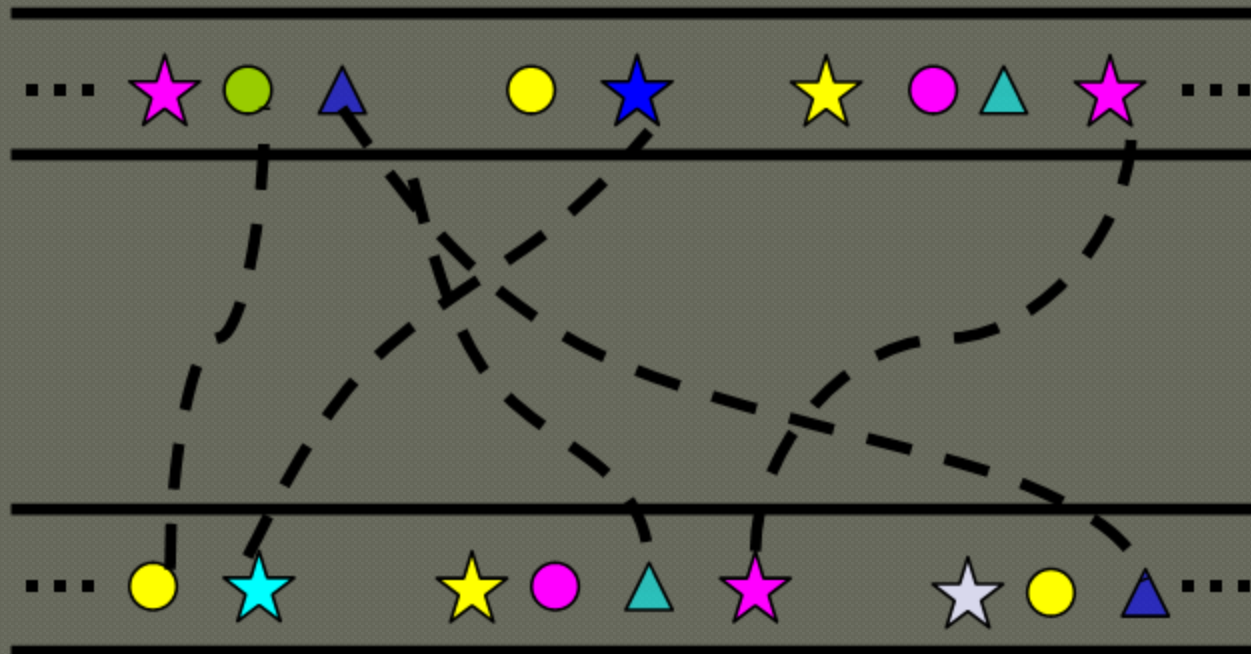

# 1: Build evaluation metrics into your product/service

---

## 2: Link and share data from different research programmes and systems on a larger scale

3: Re-use techniques and tools that have been tested and work

# 4: Be transparent about the 'quality' of your final product/service

Validated with  
500,00 people  
aged 18-85 in 3  
countries

Small RCT in UK  
with 400  
teenagers with  
PTSD

Feasibility tested  
in Edinburgh with  
cohort of 45 older  
adults

Validity,  
evidence,  
confidence  
transferability

---

Innovation,  
transformation,  
scale,  
routinisation

---

Validity,  
evidence,  
confidence  
transferability

Innovation,  
transformation,  
scale,  
routinisation

**Thank You**

# Collaborate with us

---

## **Digital Health and Wellness Group @ Strathclyde University**

We work with NHS, businesses, charities, private and public sector and other researchers to design, develop and evaluate effective mobile health and wellness related technologies and services to improve personal and population health and wellness.

Email us if you are interested in collaborating
