SUMMARY

The water treatment demonstration site for innovators to test new products and services for drinking water.

FACILITIES & EQUIPMENT

- Laboratory facilities (physico-chemical, inorganic, organic, microbiology, molecular biology)
- Laboratory equipment for analytical techniques for drinking water analysis
- HPLC
- GC
- MALDI TOF
- Particle counters
- Micro plastics
- Online instruments for pH, temperature, pressure, salinity, turbidity
- Power (16A/32A, 240V/400V, 9kW/20kW)
- Permits

APPLICATIONS

- Test products to be used in water
- Flocculation
- Sand filtration
- Activated carbon (GAC, PAC)
- Membrane filtration: reverse osmosis, micro-filtration, ultra-filtration
- Disinfection: chlorination, ozonation, UV

AVAILABLE WATER TYPES

- Drinking water from the local network
