<http://nweurope.eu/cotemaco>

In COTEMACO (increased Competitiveness through Efficient Man and Machine Collaboration), 8 international partners from **Belgium, Germany, the Netherlands and the UK** have joined forces to help small and medium-sized companies like yours adopt novel technologies, allowing you to increase flexibility and lower production costs.

Do you...

- Struggle to maintain your cost competitiveness against large-scale production facilities in low-wage economies?
- Suffer from workforce scarcity because people willing to engage in physically repetitive tasks are difficult to find?
- Need to produce highly individualised products in a very flexible production environment at very low cost?

If the answer to any of the 3 questions above is YES, then your company could benefit from collaborative robotics!

They will...

- Help you **understand** the benefits of collaborative robotics
- Take you step by step through the process of **choosing and implementing** the right solution for your company
- Reap the full **benefits** of these new technologies

Research centers, chambers of commerce and knowledge institutions from the 4 regions are **ready to guide and coach your company.**

But the best news?

We can **financially support your company** with regard to travel costs, feasibility studies and building a business case, through a voucher scheme (with the support of the European Commission through ERDF).

This lowers the threshold for SMEs to engage in the project and to start learning about the benefits of collaborative robotics today.

Never has available support for your company been so effective and easy to use!
